

ACS AREA 2

Digital Communications Course

2019

Zak Cohen, N6PK

Digital Communications

In Area 2 we use or support the following types of digital communications:

- AX.25 packet transmission using Outpost Software
- NBEAMS using MT63 protocol over Fldigi Software
- Radio Email/Winlink over Winlink Express Software
- HF Radio Email/Pactor over Winlink Express Software
- MESH Networks

Digital Communications

- Currently some of the digital techniques are covered under the Digital tab with examples of use, set-up procedures, cheat sheets and videos
- This course will put that all together in one package

As soon as development on each issue is completed it will be included in this course document
